PURCHASED FROM………………………………………………………………………………………….

The manufacturer strives for continuous improvement. For this reason, the text and illustrations in this manual are subject to change without notice.
Dear Customer,

Your new Defy appliance was manufactured in a state of the art facility and has passed the strictest quality control procedures. Important: Read these instructions for use carefully so as to familiarize yourself with the appliance before connecting it to its gas container. Keep these instructions for future reference. This User Manual may also be applicable for several other models. Differences between models are explicitly identified in the manual. This manual will provide you with information on how to operate and care for your appliance to gain the maximum benefit from it. We trust you will enjoy years of trouble free use.

EXPLANATION OF SYMBOLS
Throughout this User Manual the following symbols are used:

- **Important information or useful hints about usage.**
- **Warning for hazardous situations with regard to life and property.**
- **Warning for risk of fire.**
- **Warning for hot surfaces.**

Package contents

Accessories supplied can vary depending on the appliance model. Not all accessories in the user manual may be on your appliance.

User manual

Wire Shelf
Used for roasting and for placing food to be baked, roasted or cooked in casserole dishes on to the desired rack.

Technical specifications may be changed without prior notice to improve the quality of the appliance.

Figures in this manual are schematic and may not match your appliance exactly.

Values stated on the appliance labels or in the documentation accompanying it are obtained in laboratory conditions in accordance with relevant standards. Depending on operational and environmental conditions of the appliance, these values may vary.

The manufacturer strives for continuous improvement. For this reason, technical specifications, text and illustrations in this manual are subject to change without notice.

Page 4
2 Important safety instructions

This section contains safety instructions that will help you avoid risk of injury and damage. All warranties will become void if you do not follow these instructions.

General safety

- This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning the use of the appliance by a person responsible for their safety.
- Children should be supervised to ensure that they do not play with the appliance.
- Do not operate the appliance if it is defective or has any visible damage.
- Do not carry out any repairs or modifications on the appliance. However, some issues may remedied that do not require any repairs or modifications. See Troubleshooting.
- Never wash down the appliance with water!
- Never use the appliance when your judgment or coordination is impaired by the use of alcohol and/or drugs.
- Be careful when using alcoholic drinks in your dishes. Alcohol evaporates at high temperatures and may cause a fire since it can ignite when it comes into contact with hot surfaces.
- Do not heat closed tins and glass jars in the oven. The pressure that would build up in the tin/jar may cause it to burst.
- Do not place any flammable materials close to the appliance as the sides may become hot during use.
- Do not place baking trays, dishes or aluminium foil directly onto the bottom of the oven. The heat accumulation might damage the bottom of the oven.
- Keep all ventilation slots clear of obstructions.
- The appliance may be hot when it is in use. Never touch the hot burners, inner sections of the oven, heaters etc.
- Always use heat resistant oven gloves when putting in or removing dishes from the hot oven.
- Do not use the appliance with the front door glass removed or cracked.
• The rear surface of the oven gets hot when it is in use. Make sure that the gas connection does not come into contact with the rear surface as connections may get damaged.
• Make sure that the function knobs are switched off after every use.
• When using Gas, ensure that the room is well ventilated.
• Ventilation is vital for the efficient performance of all appliances and for the safety of the occupants of the room in which the appliance is installed.
• Always keep children and infirm persons away from the appliance when it is in use.
• Only use the appliance for preparing food.
• Use a deep pan, large enough to cover the appropriate burner.
• Always dry food thoroughly before placing it in hot oil or fat. Frozen food in particular will spit and splatter if added too quickly.
• Never fill the pan more than one third full of fat or oil.
• Never heat fat or fry with a lid on the pan.
• Do not fry too much food at once. This lowers the temperature of the oil or fat and results in fatty foods.
• Do not leave hot fat or oil unattended. If overheating occurs, these could catch fire.
• Do not use or store inflammable products (alcohol, petrol, benzene etc.) near the appliance as these pose a fire risk.

Safety for children
• Packaging materials are dangerous to children. Keep packaging materials in a safe place out of reach of children.
• Electrical and/or gas products are dangerous to children. Keep children away from the appliance when it is operating and do not allow them to play with the appliance.
• Accessible parts of the appliance will become hot whilst the appliance is in use. Children must be kept away until the appliance has cooled down.
• "CAUTION: Accessible parts may be hot when the oven is in use. Young children should be kept away."
• Do not place any items above the appliance that children may reach for.
• When the door is open, do not load any heavy object on it and do not allow children to sit on it. It may overturn or the door hinges may be damaged.
• The packaging materials are a danger for children. Keep the packaging materials away from children. Please ensure that the packaging material is disposed of in a responsible manner.
Safety when working with gas

- Any work carried out on gas equipment and systems may only be done by authorised qualified persons who are registered LPG Gas installers.
- Prior to installation, ensure that the local distribution conditions (nature of the gas and gas pressure) and the adjustment of the appliance are compatible.
- This appliance must be installed and connected in accordance with current installation regulations.
- Particular attention shall be given to the relevant requirements regarding ventilation; See Before installation.
- Particular attention must be given to relevant requirements regarding ventilation; See Before installation.

DANGER. Risk of explosion and poisoning! Put out all naked flames and do not smoke, strike matches or do anything that could cause ignition. Do not operate any electric switches (e.g. light switch, TV, computer, cooker or door bell). Do not use a telephone or mobile phone.

CAUTION: The use of gas cooking appliances results in the production of heat and moisture in the room in which it is installed. Ensure that the kitchen is well ventilated: keep natural ventilation holes open or install a mechanical ventilation device (mechanical extractor hood). Prolonged intensive use of the appliance may call for additional ventilation, for example increasing the level of the mechanical ventilation where present.

- Gas appliances and systems must be regularly checked for proper functioning. The regulator, hose and its clamp must be checked regularly and replaced within the periods recommended by its manufacturer or when necessary.
- Clean the gas burners regularly. The flames should be blue and burn evenly.
- Good combustion is required in gas appliances. In case of incomplete combustion, carbon monoxide (CO) might develop. Carbon monoxide is a colourless, odourless and very toxic gas, which has a lethal effect even in very small doses.
- Request information about gas emergency telephone numbers and safety measures from your local gas provider in case of a gas smell.
In the event of a pan fire
- Switch off the Gas supply.
- Smother the flames with a blanket or damp cloth.
- Burns and injuries are usually caused by picking up the burning pan and rushing outside with it.
- Do NOT use water to extinguish an oil or fat fire.

SAVE THESE INSTRUCTIONS

If you smell gas
- Turn off all valves on gas appliances and gas meter at the main control valve, unless it's in a confined space or cellar.
- Extinguish all naked flames.
- Do not operate any electrical appliances.
- Ventilate the area. Open doors and windows.
- Check for leaks. Check all tubes and connections for tightness.
- If odour persists contact your nearest Defy Service Centre for assistance.
- If you still smell gas leave the property.
- Warn the neighbors.
- Call the fire-brigade. Use a telephone outside the house.
- If you have door or gates that are secured by an electric lock, or entry phone, please open these manually.
- Do not re-enter the property until you are told it is safe to do so.

Action to be taken in the event of a burn back
- In the event of a burn back (where the flame burns back into the jet) immediately turn off the control to the affected burner.
- Wait a few minutes and relight the burner in the normal manner.
- If the burn back occurs again, turn off the control knob to the affected burner, and consult the nearest Defy service technician, who will advise you.

Important: Read these instructions for use carefully so as to familiarize yourself with the appliance before connecting it to its gas container. Keep these instructions for future reference.
Ventilation
• Room ventilation is vital for the efficient performance of the appliance and for the safety of the occupants in the room in which the appliance is installed.

Intended use
This appliance is designed for domestic use. Commercial use will void the warrantee.

CAUTION: This appliance is for cooking purposes only. It must not be used for other purposes.

This appliance must not be used for warming plates, drying towels, dish cloths etc. by hanging them on the oven door handles. This product should also not be used for room heating purposes.

The manufacturer shall not be liable for any damage caused by improper use or handling errors.

IMPORTANT:
If the gas type of the appliance is changed, then the rating plate that shows the gas type of the unit must also be changed.

IMPORTANT:
If the gas type of the appliance is changed, then the sticker that is currently on the rear of the appliance that reads “Factory adjusted for LPG gas” must be replaced by the sticker “Adjusted for natural gas”. The new sticker can be found in the gas jet kit supplied with the appliance.

Oven flame failure – safety cut out. (Oven only)
In the unlikely event of a flame blow out, caused by an overflow of fluid at the oven burner, a safety mechanism will automatically shut off the gas to the oven approximately 30 seconds after the flame extinguishes.
**Anti-tilt mechanism**

All stoves can tilt if you or a child sit or lean on an open oven door.

⚠️ **WARNING**

⚠️ **WARNING**: in order to prevent tipping of the appliance, this stabilizing means must be installed. Refer to the instruction for installation.

- “A” 1 x Stability chain
- “B” 1 x Stability hook with anchor sleeve
- “A” is factory fitted at the rear of the stove in the centre. (See overleaf for instructions if the removable splashback is to be fitted)
- Position the stove and move “A” to touch the wall behind the stove.
- Mark the hole where “A” touches the wall behind the stove.
- Move the stove away from the wall to allow for an area to work in.
- Using a 8.0 mm concrete bit, drill a hole at the marked position.

- Using the Stability hook and anchor sleeve “B”, firmly secure “B” to the wall.
- Slide the stove back in position and engage the stability chain “A” onto stability hook “B”.
- The stove is then secured and will not accidentally tilt if downward pressure is applied to the open oven door.
3 Installation

Installation is the buyer’s responsibility. The manufacturer accepts no liability for this service. Any action that the manufacturer has to take as a result of an erroneous installation will not be covered by the warranty.

The necessary installation, including gas and electrical connections, must be carried out by qualified personnel in accordance with current and local regulations. An installation by an unqualified person may constitute a hazard.

Installations carried out by unauthorized persons will void the warranty.

The manufacturer shall not be held responsible for injury to persons or damages arising from procedures carried out by unauthorized persons or due to non compliance with these provisions.

<table>
<thead>
<tr>
<th>Preparation of location, electrical and gas installation for the appliance falls under the customer’s responsibility.</th>
</tr>
</thead>
<tbody>
<tr>
<td>DANGER The appliance must be installed in accordance with all local gas and/or electrical regulations.</td>
</tr>
<tr>
<td>DANGER Prior to installation, visually check if the appliance has any defects on it. If so, do not have it installed. Damaged appliances are a safety risk.</td>
</tr>
</tbody>
</table>

**Before installation**

To ensure that critical air gaps are maintained under the appliance, we recommend that this appliance is mounted on a solid base and that the feet do not sink into any carpet or soft flooring.

The kitchen floor must be able to carry the weight of the appliance plus the additional weight of cookware, bakeware and food.

- The appliance can be used with cabinets on either side but in order to have a minimum distance of 400mm above hotplate level allow a side clearance of 65mm between the appliance and any wall, partition or tall cupboard.
- The appliance can also be used in a free standing position. Allow a minimum distance of 750 mm above the hob surface.
- (*) If a cooker hood is to be installed above the cooker, refer to cooker hood manufacturer instructions regarding installation height (min 650 mm).
- The appliance corresponds to device class 1, i.e. it may be placed with the rear and one side to kitchen walls, kitchen furniture or equipment of any size. The kitchen furniture or equipment on the other side may only be of the same size or smaller.
- Any kitchen furniture next to the appliance must be heat-resistant (100 °C min.).

**LPG Gas Only:** Do not install this appliance in a room below ground level unless it is open to ground level on at least one side. Failure to install appliances correctly is dangerous and could lead to prosecution.

This appliance uses LPG (Liquid petroleum or bottle gas).

This appliance requires an operating pressure of 2.8-3.0 kPa. A suitable LPG regulator that complies with the requirements of SANS 1237 must be used.

The manufacturer and the seller do not accept responsibility for any damage due to incorrect installation or gas connection.

Gas bottles should be located outdoors in a suitable ventilated lock-up.

The connecting hose should not exceed 200 cm in length.

**Room ventilation**

All rooms require a window that can be opened, or equivalent, and some rooms will require a permanent vent in addition.

Air for combustion is drawn from the room and the exhaust gases are emitted directly into the room, therefore good room ventilation is essential for the safe operation of your appliance. If there is no window or door available for room ventilation, extra ventilation must be installed.

The appliance may be located in a kitchen, kitchen/diner or a bed-sitting room, but not in a room containing a bath or shower. The appliance must not be installed in a bed sitting room of less than 20m³. Do not install this appliance in a room below ground level unless it is open to ground level on at least one side.
Installation and connection

This appliance can only be installed and connected in accordance with the statutory installation rules.

<table>
<thead>
<tr>

</tbody>
</table>

Important information

Upon completion of the installation ensure that you are familiar with the following:

1. a) The position of the isolation or shut-off valve in the gas supply line to the appliance.
2. b) The requirements for safe operation of the appliance

Note: This appliance is supplied ex-factory with jets and air settings for use with LPG gas only.

Safety compliance with local requirements:

Installation

A stove without a flame failure device may only be used with a free standing cylinder placed adjacent to but not closer to 300 mm to the stove.

Ensure that pipe clamps are tightened correctly and are of good quality.

- **Flexible hose**
  - Any hose that is used to connect the stove to the gas system shall comply with SANS 1156-2 or BS 3212.
- **Gas cylinder** - Not supplied.
  - For best results we recommend that gas cylinders with a minimum capacity of 9kg be used.
- **Regulator - Not supplied**
  - A 2.8-3.0 kPa LPG gas regulator which complies with SANS 1237 must be used.

Failure to comply with the above will render the warranty invalid.

Note:

Your invoice is required in the event of you wishing to make a warranty claim.

Installation and connection

This appliance can only be installed and connected in accordance with the statutory installation rules.

Do not install the appliance next to refrigerators or freezers. The heat emitted by the appliance will lead to an increased energy consumption of cooling appliances.

Carry the appliance with at least two persons. The appliance must be placed directly on the floor. It must not be placed onto a base or a pedestal.

Material damage!

The door and/or handle must not be used for lifting or moving the appliance.

Gas connection

**DANGER Risk of explosion or poisoning by unprofessional installation.**

The appliance may be connected to the gas distribution system only by a registered LPG installer.

**DANGER Risk of explosion!**

Before starting any work on the gas installation, please shut off the gas supply.

- Gas adjustment conditions and values are stated on labels (or on type label).

Your appliance is adjusted for LPG gas.

A stove without a flame failure device may only be used with a free standing cylinder placed adjacent to but not closer to 300 mm to the stove.

Gas regulator (Not supplied)

Range – 2.8 KPA SA5 regulator with a 2 meter hose and 2 hose clamps.

Connecting the gas hose

- Have your appliance connected so that it will be close to the gas connection. Ensure that there is no gas leakage.
- Gas bottles should be located outdoors in a suitable ventilated lock-up.
- The connecting hose to be used must not be longer than 200 cm in length.
- Fit the clamp to the hose. Soak one end of the hose (15 mm inner diameter) into hot water for 60 seconds to soften, then slip the softened end of the hose completely onto the sharp hose tip of the appliance.
- Secure the hose by tightening the hose clamp.
- Repeat the same procedure for the other end of the hose by securing it to the regulator on the gas bottle to complete the gas cylinder connection.
- Always check for gas leaks after installation and whenever a new or refilled gas bottle is used for the first time.

**DANGER Risk of explosion and suffocation!** LPG bottles must not be stored in the house.

1. Hose tip-LPG
2. Hose tip-NG
3. Safety hose
4. O-ring (gasket)
5. Clamp

**Routing of the gas hose**

Before connecting the gas hose, make sure that the gas hose outlet behind the product is in the same direction as the hose outlet.

If the gas hose is not in the same direction as the hose outlet, mount it so that it does not pass through the hot zone when connecting the hose.

**Manifold protector plug removal:**

The manifold protection plug is inserted into the manifold at factory level in order to protect the manifold from being contaminated with debris. The manifold protection plug must be removed when the product is installed by the gas installer.

The red manifold protection plug can be removed from the manifold by grabbing it with your fingers or if necessary with the aid of a small pair of pliers.

**Leakage control at the connection point**
- Ensure that the control knobs on the control panel are in the OFF position.
- Open the valve on the Gas bottle.
- Using a small paint brush, apply some soapy water to all the connections.
- If there is a leak, bubbles will appear.
- If this occurs, close the gas bottle valve.

**Caution:** Never use a naked flame to check for gas leaks.

**DANGER Risk of explosion by damage of the safety tube!**
The safety tube must not be clamped, bent or trapped or come into contact with hot parts of the appliance.
• Push the appliance towards the kitchen wall.

Final check
1. Open gas supply.
2. Check gas installations for secure fitting and tightness.
3. Ignite burners and check appearance of the flame.

The flames should be blue and burn smoothly. If the flames appear yellowish, check that the burner cap is seated correctly or clean the burner. Switch off the gas and let burner cool before touching it.

Package information
Packaging materials are dangerous to children. Keep packaging materials in a safe place out of reach of children.

Packaging materials of the appliance are manufactured from recyclable materials. Do not dispose of the packaging materials together with domestic or other wastes. Dispose of them in a responsible manner.

Future Transportation
Keep the appliances original carton and transport the appliance in it. Follow the instructions on the carton. If you do not have the original carton, pack the appliance in bubble wrap or thick cardboard and tape it securely.

To prevent the wire grill and tray inside the oven from damaging the oven door, place a strip of cardboard onto the inside of the oven door that lines up with the position of the trays. Tape the oven door to the side walls.

Secure the caps and pan supports with adhesive tape.

Do not use the door or handle to lift or move the appliance.

First cleaning of the appliance

The surface of the appliance may be damaged by some detergents or cleaning materials. Do not use aggressive detergents, cleaning powder, cream or any sharp objects.

1. Remove all packaging materials.
2. Wipe the surfaces of the appliance with a damp cloth or sponge and dry with a cloth.

Initial heating

Heat up the appliance for about 30 minutes and then switch it off. This will ensure that any production residues or layers will be burnt off and removed.

4 Preparation

Tips for energy saving

The following information will help you to use your appliance in an ecological way, and to save energy:

• Use dark coloured or enamel coated cookware in the oven for better heat transmission.

• Before cooking your dishes, perform a preheating operation if it is advised in the user manual or cooking instructions.

• Do not open the door of the oven frequently during cooking.

• Try to cook more than one dish in the oven at the same time whenever possible. Two cooking vessels can be placed onto the wire shelf.

• Cook more than one dish one after another. The oven will already be hot.

• Save energy by switching off your oven a few minutes before the end of the cooking time. Do not open the oven door.

• Defrost frozen dishes before cooking them.

• Use pots and pans with covers for cooking. Without cover, energy consumption may increase 4 times.

• Select the burner which is suitable for the bottom size of the pot that is to be used. Always select the correct pot size for your dishes. Larger pots require more energy.

Disposing of the old appliance

Dispose of the old appliance in an environmentally friendly and safe manner. Refer to your local dealer or solid waste collection centre in your area to learn how to dispose of your product. Before disposing of the product, make the door lock (if any) unusable to avoid dangerous conditions to children.
Gas oven
1. Take all baking trays and the wire grill out of the oven.
2. Close the oven door.
3. Select the highest flame of the gas oven; see How to use the gas oven, page 19.
4. Operate the oven about 30 minutes.
5. Turn off your oven; See How to use the gas oven, page 19.

Smell and smoke may emit during the first heating. This is not a fault and is quite normal and is due to any production residues or layers being burnt off and removed. Ensure that the room is well ventilated.

5 Using the hob

General information about cooking

DANGER
Risk of fire by overheated oil!
When heating oil, do not leave it unattended.
Never try to extinguish a fire with water! When oil has caught fire, immediately cover the pot or pan with a lid. Switch off the hob if safe to do so and phone the fire service.

- Before frying foods, always dry them well and gently place into the hot oil. Ensure complete thawing of frozen foods before frying.
- Do not cover the pot or pan being used when heating oil.
- Place the pans and saucepans in a manner so that their handles are not over the hob to prevent heating of the handles. Do not place unbalanced and easily tilting cooking vessels on the hob.
- Do not place empty pots and saucepans on cooking zones that are switched on. They might get damaged.
- Operating a cooking zone without a pot, pan or saucepan on it may cause damage to the appliance. Turn off the cooking zones after cooking is complete.
- As the surface of the appliance can be hot, do not place plastic and aluminum vessels on it.
- Plastic and aluminum vessels should not be used to keep foods in.
- Use flat bottomed saucepans or cooking vessels only.
- Place only the appropriate amount of food in saucepans and pans. Doing so will assist with not having to do any unnecessary cleaning as this will help prevent the dishes from overflowing.
- Do not put covers of saucepans or pans on the cooking zones.
- Place saucepans so that they are centered on the cooking zone. When moving the saucepan onto another cooking zone, lift and place it onto the other cooking zone instead of sliding it.

Gas cooking
- The size of the cooking vessel and the flame must be suited to each other. Adjust the gas flames so that they do not extend past the bottom of the cooking vessel and ensure that the cooking vessel is centered on the saucepan carrier.

Using the hobs

Important! See cooking information table on page 4 for cooking vessel sizes. The large flame symbol indicates the highest cooking power and small flame symbol indicates the lowest cooking power. In the turned off position (top), gas is not supplied to the burners.

Igniting the gas burners
Burner is not equipped with automatic ignition. Use a lighter or match.
1. Keep the burner knob pressed in.
2. Turn it counter clockwise to the large flame symbol.
3. Ignite the hob with lighter.
4. Adjust it to the desired cooking power.

Turning off the gas burners
Turn the knob to off (upper) position.

Fitting the Burner Caps

Incorrect

Correct

6 How to operate the oven

General information on baking & roasting

WARNING: Hot surfaces may cause burns! Do not touch the hot surfaces of the appliance. Use oven gloves. Keep children away from the appliance.

DANGER: Risk of scalding by hot steam! Take care when opening the oven door as steam may escape.

Tips for baking
- Use non-sticky coated appropriate metal plates or aluminum vessels or heat resistant silicone moulds.
- Make best use of the space on the rack.
- Place the baking mould in the middle of the shelf.
- Select the correct rack position before turning the oven on. Do not change the rack position when the oven is hot.
- Keep the oven door closed.
Tips for roasting
- Treating whole chicken, turkey and large pieces of meat with dressings such as lemon juice and black pepper before cooking will increase the cooking performance.
- It takes about 15 to 30 minutes longer to roast meat with bones when compared to roasting the same size of meat without bones.
- Each centimeter of meat thickness requires approximately 4 to 5 minutes of cooking time.
- Let meat rest in the oven for about 10 minutes after the cooking time is over. The juice is better distributed all over the roast and does not run out when the meat is cut.
- Fish should be placed on the middle or lower rack in a heat-resistant plate.

Tips for cooking vegetables
If the vegetable dish runs out of juice and gets too dry, cook it in a pan with a lid instead of a tray. Closed vessels will preserve the juice of the dish. If a vegetable dish does not get cooked, boil the vegetables beforehand or prepare them like canned food and place in the oven.

How to use the gas oven
The gas oven is operated by the gas oven control knob. In the off position (top) the gas supply is Off.

Switch on the gas oven
The gas oven is ignited with a gas lighter.
1. Open oven door.
2. Keep gas oven control knob pressed and turn it counterclockwise.
3. Ignite the gas with the gas lighter from the ignition control hole.
4. Keep the burner control pressed for 3 to 5 seconds. » Be sure that gas has ignited and flame is present.
5. Keep the burner control pressed for another 3 to 5 seconds.
6. Select the desired baking power/ gas mark.

Tips for roasting
- Treating whole chicken, turkey and large pieces of meat with dressings such as lemon juice and black pepper before cooking will increase the cooking performance.
- It takes about 15 to 30 minutes longer to roast meat with bones when compared to roasting the same size of meat without bones.
- Each centimeter of meat thickness requires approximately 4 to 5 minutes of cooking time.
- Let meat rest in the oven for about 10 minutes after the cooking time is over. The juice is better distributed all over the roast and does not run out when the meat is cut.
- Fish should be placed on the middle or lower rack in a heat-resistant plate.

Tips for cooking vegetables
If the vegetable dish runs out of juice and gets too dry, cook it in a pan with a lid instead of a tray. Closed vessels will preserve the juice of the dish. If a vegetable dish does not get cooked, boil the vegetables beforehand or prepare them like canned food and place in the oven.

How to use the gas oven
The gas oven is operated by the gas oven control knob. In the off position (top) the gas supply is Off.

Switch on the gas oven
The gas oven is ignited with a gas lighter.
1. Open oven door.
2. Keep gas oven control knob pressed and turn it counterclockwise.
3. Ignite the gas with the gas lighter from the ignition control hole.
4. Keep the burner control pressed for 3 to 5 seconds. » Be sure that gas has ignited and flame is present.
5. Keep the burner control pressed for another 3 to 5 seconds.
6. Select the desired baking power/ gas mark.

DANGER: There is the risk of gas compression and explosion!
Do not attempt to ignite the gas for more than 15 seconds. If the burner is not ignited within 15 seconds, turn off the knob and wait for 1 minute. Ventilate the room before reattempting to ignite the burner. There is the risk of gas compression and explosion!

Oven flame failure – safety cut out. (Oven only)
In the unlikely event of a flame blow out, caused by an overflow of fluid at the oven burner, a safety mechanism will automatically shut off the gas to the oven approximately 30 seconds after the flame extinguishes.

7 Maintenance and care

General information
The service life of the appliance will extend and the possibility of problems will decrease if the appliance is cleaned at regular intervals.

Service intervals
- Every twelve months the appliance should be serviced by a Defy Service agent to ensure continued efficient and safe operation.
- If required, the cleaning of the valves should only be carried out by a qualified Defy technician. i.e. Burner not functioning correctly.
- Wash removable burner parts weekly with hot water and detergent.
- Remove any encrustations and ensure that the burner holes are clear.
- The condition of the gas hose and valve should be inspected for leaks every time the gas bottle is refilled.

DANGER Hot surfaces may cause burns! Allow the appliance to cool down before you clean it.

Cleaning the hob
Gas hobs
1. Remove and clean the saucepan carriers and burner caps.
2. Clean the hob.
3. Install the burner caps and make sure that they are seated correctly.
4. When installing the upper grills, pay attention to place the saucepan carriers so that the burners are centered.

Cleaning the control panel
Clean the control panel and knobs with a damp cloth and wipe them dry.
- Clean the appliance thoroughly after each use. This enables cooking residues to be removed more easily and prevents these from burning when the appliance is used.
- No special cleaning agents are required for cleaning the appliance. Use warm water with washing liquid, a soft cloth or sponge to clean the product and wipe it with a dry cloth.

Cleaning the oven / oven door
To clean the oven door, use warm water with washing liquid, a soft cloth or sponge to clean the appliance and wipe it with a dry cloth.

Don't use any harsh abrasive cleaners or sharp metal scrapers for cleaning the oven door. They could scratch the surface and destroy the glass.

Do not use steam cleaners for cleaning.

Removal of oven door
The oven door can be disassembled for easier cleaning of the inner space of the oven.
1. Open oven door entirely.
2. Press hinged shackles back on both sides.
3. Put oven door in a slightly sloping position.
4. Lift the oven door to the front with both hands.

Install oven door again in reverse order after cleaning.

Gas Jet Cleaning Procedure
- Every six months the gas jets on your hob should be cleaned to ensure continued efficient and safe operation.
- This may be done using a Gas Jet Cleaning Kit which may be purchased from your nearest Defy Service Centre.
- The kit comprises of a sliding T-bar (A) a socket (B) and a ‘Classic pin’ (C).
- Fit the T-bar to the socket and remove the pot stands, burner caps and burner bodies.
1. Insert the socket into the central tube of the burner so that it locates over the brass gas jet at the bottom of the tube.
2. Gently loosen the brass gas jet by turning the socket in an anti-clockwise direction.
3. Carefully lift the socket and loosened brass gas jet from the central burner tube.
4. Insert the Classic pin into central hole of the jet and slide it up and down until the jet is free of accumulated dirt.
5. Re-assemble in reverse order.
6. Clean all the burner jets in the manner described above.

X
Always ensure any excess liquid is thoroughly wiped off after cleaning and any spillage is immediately wiped dry.

Never use high-pressure steam equipment or a water jet for cleaning.

Do not use cleaning agents that contain acid or chloride.

Never use cleaning products containing abrasive materials as these could damage the decorative and informative paint applications.

Remove the burners and wipe them with a thin damp cloth or a non-abrasive sponge. Use a neutral detergent. Dry afterward with a soft cloth and blow away any residual water in the gas outlet holes.

Gas Jet Cleaning Procedure
- Every six months the gas jets on your hob should be cleaned to ensure continued efficient and safe operation.
- This may be done using a Gas Jet Cleaning Kit which may be purchased from your nearest Defy Service Centre.
- The kit comprises of a sliding T-bar (A) a socket (B) and a ‘Classic pin’ (C).
- Fit the T-bar to the socket and remove the pot stands, burner caps and burner bodies.
1. Insert the socket into the central tube of the burner so that it locates over the brass gas jet at the bottom of the tube.
2. Gently loosen the brass gas jet by turning the socket in an anti-clockwise direction.
3. Carefully lift the socket and loosened brass gas jet from the central burner tube.
4. Insert the Classic pin into central hole of the jet and slide it up and down until the jet is free of accumulated dirt.
5. Re-assemble in reverse order.
6. Clean all the burner jets in the manner described above.
8 Troubleshooting

Problem solving guide—before calling for technical support

If the problem cannot be remedied after following the troubleshooting problem solving guide, please consult with an authorised service agent or the dealer where you purchased the appliance. Never attempt to repair a defective appliance yourself.

10 Warranty

This certificate is issued by DEFY APPLIANCES (PTY) LTD manufacturers of Defy and Ocean products, hereinafter the Company, to the original purchaser only, of the appliance described on the certificate and shall constitute the only warranty given in respect of this appliance.

The Company warrants to the original purchaser that for a period of TWO YEARS from date of purchase the appliance is free from defect under normal domestic use, both in workmanship and material, subject to the following conditions.

1. Repair or replacement of any part of this appliance, found by the Company to be defective, shall be at the election of the Company. The Company reserves the right to effect such service through any of its Service Divisions or Authorised Service Dealers. The cost of such service shall be borne by the Company in full, provided that the appliance is located no further than 50 km from a Company Service Centre or an Authorised Service Dealer. Where the appliance is located beyond the 50 km radius, the purchaser shall be liable for the standard travelling charges, as determined by the Company. CARRY IN SERVICE Microwave ovens, Compact cookers and small appliances are repaired in our service centres and are not collected from the customers home. Faulty units must be delivered to the purchasing dealer or to the nearest Company Service Centre for warranty repairs.

2. Rusted or corroded plates, vitreous enamelware, fuses and lamps are specifically excluded from these warranties. It is an express condition of these warranties that the purchaser takes due care and attention in the use and maintenance of the appliance. Abuse, misuse in conflict with operating instructions, connection to incorrect voltages and subjection to commercial use shall release the Company from its obligations.

3. This warranty shall become void and cease to operate if the appliance is dismantled by, or any repairs to the appliance are effected by any persons not duly authorised by the Company, or if substitute parts not approved by the Company are used in the appliance, or if the serial number of the appliance is removed.

4. The Company shall not be responsible for damages resulting from fire, flood, civil disturbances or any Act of God. The Company shall not, in terms of these warranties be responsible nor held liable for any consequential loss or damage of any kind caused by or due to the failure or malfunction of the appliance. The Company shall not be responsible for damages caused by insect and/or animal infestation.

5. The Company shall not be responsible for transportation or other costs other than those incurred within the provisions of Point 1 of this Certificate.

6. For warranties in the Republic of South Africa and Sub-Saharan Africa, please contact your nearest Defy office. Please refer to the previous page for respective South African branches and Sub-Saharan Africa branches.

7. Where service is requested under warranty and no fault or defect can be found by the Company, all costs incurred will be for the purchaser’s account.

8. This Certificate as well as your invoice will serve as proof of purchase. For the purpose of warranty, it will be essential to produce this Certificate and invoice. Failure to do so, will render the purchaser liable for service costs.

KEEP THIS CERTIFICATE AND SALES INVOICE AS PROOF OF PURCHASE FOR WARRANTY PURPOSES.
